Progress in Surface Science

EDITOR:
PROF. SYDNEY G. DAVISON

Department of Physics
Texas A & M University
College Station, Texas 77843-4242
U.S.A.

MANAGING EDITOR:
PROF. W.K. LIU

Physics Department
University of Waterloo
Waterloo, Ontario
Canada N2L 3G1

ADVISORY BOARD

I. BARTOS
Academy of Sciences
Prague, Czechoslovakia

B.E. CONWAY
University of Ottawa
Ontario, Canada

A.S.G. CURTIS
University of Glasgow,
Scotland

A.W. CZANDERNA
Solar Energy Research Institute
Golden, Colorado, U.S.A.

D.D. ELEY
University of Nottingham,
England

P.J. ESTRUP
Brown University
Providence, Rhode Island, U.S.A.

J.W. GADZUK
National Bureau of Standards
Gaithersburgh, Maryland, U.S.A.

V.E. HENRICH
Yale University
New Haven, Connecticut, U.S.A.

N.I. IONOV
Academy of Sciences
Leningrad, U.S.S.R.

J. KOUTECKY
Freie Universitat
Berlin, F.R. Germany

R.M. LATANISION
Massachusetts Institute of Technology
Cambridge, Massachusetts, U.S.A.

J.D. LEVINE
Texas Instruments
Dallas, Texas, U.S.A.

A.A. MARADUDIN
University of California
Irvine, California, U.S.A.

S.R. MORRISON
Simon Fraser University
Burnaby, Canada

K. MULLER
University of Erlangen-Nurnberg
West Germany

R. PARSONS
University of Southampton, England

J.B. PENDRY
Imperial College
London, England

S.T. PICRAUX
Sandia National Laboratory
Albuquerque, New Mexico, U.S.A.

T.N. RHODIN
Cornell University
Ithaca, New York, U.S.A.

S. SUGANO
University of Tokyo, Japan

H. TI TIEN
Michigan State University
East Lansing, Michigan, U.S.A.

L. WEISS
Roswell Park Memorial Institute
Buffalo, New York, U.S.A.

R.F. WILLIS
University of Cambridge
England

Publishing, Subscription and Advertising Offices: Pergamon Press, Inc., Fairview Park, Elmsford, New York 10523, U.S.A. and Pergamon Press plc, Headington Hill Hall, Oxford OX3 OBW, England.

Published Monthly: 3 volumes per year, 4 issues per volume. Annual institutional subscription rate (1988): DM800.00; Two-year institutional rate (1988/89): DM1520.00; Personal subscription rate for those whose library subscribes at the regular rate: DM213.00. Prices are subject to change without notice. Notify 8 weeks in advance of address change with a copy of the subscription mailing label. Microform subscriptions: Information available upon request.

Copyright © 1988 Pergamon Press plc.

It is a condition of publication that manuscripts submitted to this journal have not been published and will not be simultaneoulsy submitted or published elsewhere. By submitting a manuscript, the authors agree that the copyright for their article is transferred to the publisher, if and when the article is accepted for publication. The copyright covers exlusive rights to reproduce and distribute the article, including reprints, photographic reproductions, microform or any other reproductions of similar nature and translations. No part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means, electronic, electrostatic, magnetic tape, mechanical, photocopying, recording or otherwise, without permission in writing from the copyright holder.

Photocopying information for users in the U.S.A.: The Item-Fee Code for this publication indicates that authorization to photocopy items for internal or personal use is granted by the copyright holder for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service provided the stated fee for copying beyond that permitted by Section 107 or 108 of the United States Copyright Law is paid. The appropriate remittance of $0.50 per page is paid directly to the Copyright Clearance Center Inc., 27 Congress Street, Salem, MA 01970.

Permission for other use. The copyright owner's consent does not extend to copying for general distribution, for promotion, for creating new works, or for resale. Specific written permission must be obtained from the publisher for such copying. Please contact the Subsidiary Rights Manager, at either Pergamon Press, Inc. or Pergamon Press plc.

The Item-Fee Code for this publication is: 0079-6816/87 $0.00 + .50

List of Contents, Volume 22, 1986

Resonant Response of a Bare Metallic Grating to S-Polarized Light 1
by A. WIRGIN and A.A. MARADUDIN

A Multitechnique Approach to Chemisorption Studies: The N_2-Ni(110) System 101
by M. GOLZE, M. GRUNZE and W. UNERTL

Vibrational Lineshapes of Adsorbates on Solid Surfaces 181
by H. UEBA

New Models for the Structure of the Electrochemical Interface 323
by W. SCHMICKLER and D. HENDERSON

SUBJECT INDEX

Adatom-adatom interactions
  coverage dependence, charge transfer coefficient 386-87
  electrostatic and model Hamiltonian 387-88
  electrostatic potential 388-90
  lattice sums and surface integrals 390-91
  model calculation results 391-93
Adatom-solvent interaction
  estimation of 381-82
  harmonic approximation 377, 378
  solvation energy model 381
Adsorbate/metal systems, estimation of charge transfer
  alkali ions on mercury 384
  calculation of coefficients 383
  data for 382
  other metal ions and 384-85
Adsorption and entropy in adsorbed layer, isoteric heat
  assumptions and formalism 140-42
  at lowest coverages 145-50, 151, 152
  UPS isobars 142, 144, 145
  XPS isobars 142-43, 145
Adsorption energy and back-bonding model 263-64
Adsorption states and vibrational spectrum 185-86
Ag films and SERS 12-14
Alkali ions on mercury, charge transfer coefficients 383, 385
Asymmetry
  C-H stretching modes 288
  EHP and 293
  Fano lineshape 292-95
  IR lineshapes 308
  mechanisms for 295
  SERS spectrum 295
Attenuated total reflections (ATR), spectrum and technique 203-4

Back-bonding model
  adsoprtion energy and 263-64
  C-O bond weakening and 249
  frequency shift with coverage 245-46
  vibrational lineshape frequency 248, 260
Back-donation and bonding 291
Bonding, N_2-Ni(110) 165, 166
Boundary and continuity conditions 27-28
Boundary value problem
  boundary conditions 24-25
  configuration views 21-22
  plane wave response, lamellar grating 26
  scattering problem relations 23-24
  two-dimensional interaction 22, 23
Broadening, lineshape and
  homogeneous 239, 255
  inhomogeneous 239
  isotopic mixture experiments 259
  mechanisms 295-97
  spectroscopies and 265
Bulk electronic energy levels 374-75

Capacitance, G-C theory 330, 333, 334
Capacitance, interfacial in ion-dipole-jellium model, 365-66
Carbonyl complexes, CO adsorption and C-O bond 248, 249
Cavity mode amplitudes, determination of S-polarization 27, 30
  cavity resonances and 41-44, 51
  matrix equations 27, 30
  matrix equations, numerical procedure 31-37
  Rayleigh plane wave amplitudes and 53-57
Cavity resonances 17-19
Cavity resonances and cavity mode amplitude
  far-field response and 48-49
  location of 44, 51

(Cavity resonances...amplitude, cont.)
poles and 41-43, 53
Cavity resonances and grating anomalies 17-19
Cavity resonances, influence on electric field 61-66
Charge profile, Gouy-Chapman theory 327
Charge transfer coefficient
coverage dependence 386-87
potential dependence 385
Charge transfer coefficient, partial
definition 374
electroabsorption valency 371, 372, 373
Charge transfer coefficients, estimation
alkali ions on mercury 384
calculation of 383
data for particular systems 382
halide ions on mercury 384
metal ions 384-85
potential dependence 385-86
simple system parameters 380-82
Charge transfer models, SERS process and chemical effect
coupled molecule-metal, Gersten et al 216
direct photon-driven, Ueba 216, 217-18
elementary process 215-16
experimental evidence 220-21
incident photon excitation, Persson 216
metal-to-molecule driven 218-19
Newns-Anderson model for chemisorption 216, 217
vibrational modes and metal-to-molecule 219-20
Chemical enhancement mechanisms, SERS 11-12
Chemical reactions at electrodes, IRAS techniques 305-6
Chemical reactions, vibrational excitation of adsorbates 297
Cluster model, vibrational lineshape frequency 247-49
CO adsorption, linear-bonded sites
vibrational frequency 253
back-bonding model 245-46
cluster model 247-49
C-O stretching frequencies 240-41
correlation of electronic and vibrational properties 247, 260-61
N-N stretching frequencies 242, 244
work function charge and 261, 262
CO adsorption on evaporated metal films, IRAS and 307-8
CO adsorption on Fe(100) 309-10
CO oxidation process at Pt electrode 305-6
C-O stretching frequencies 240-41
back-bonding model 245-46
cluster model 247-49
electrodynamic models 250, 252, 253-54
empirical expression 249
gross population changes and 248, 249
Coherent potential approximation (CPA) and vibrational interaction of molecules 256, 257, 260
Correlation time, vibrational lineshapes and 235, 236, 237, 238
Coverage dependence, charge transfer coefficient 386-87
Coverage dependence function parameters and SERS 10-11
Coverage dependence of chemical effect
back-bonding model 245-26, 260
intra-molecular stretching vibration 263
Crystallography, N_2-Ni(100) adsorption
antiphase domain wall 166-67
banana phase 165, 167, 168-69
commensurate phase 109,
fluid phase 105
incommensurate phase 105, 169

Damping rate
adsorbate electronic properties 296-97
dynamical transfer 284
EHP excitation 280, 281-84
EHP vibrational damping 284-87
electronic mechanisms 280, 281-82
potential scattering contribution 281-82
static charge transfer 284
Debeye-Huckel (DH) theory, interfacial region 331
Densities of state, semiconductor/molten salt surface 404, 405, 407-10
Dephasing and line width 269-71
Desorption and adsorption kinetics, N_2-Ni(110) system
activation energy of adsorption 152-54, 156, 157
activation energy of adsorption, coverage dependence 156, 158
simulation of desoprtion data 161
TDS data simulation, precursor model 159, 160
thermal desorption spectroscopy (TDS) 152-54, 156-62
Desorption dynamics, vibrational lineshapes and
energy transfer processes 302-3
EHP excitations 301-2
IR-stimulated 298-302
laser-stimulated 299, 300
macroscopic master equation 302-4

(Desorption dynamics, cont.)
one-dimensional model 300-1
photon excitation 304
population dynamics 304
quantum statistical theory of 302
temperature and 302
Diatonic molecule, adsorption states and vibrational spectrum 185-86
Dipole scattering theory, long-range and EELS 223-25

Electric field enhancement, determination of S-polarization 29, 31
Electric field enhancement in grooves
groove height and 74, 75, 77
influence of changing groove width and grating period 79-82
influence of groove depth 69, 72-76
plane surface polaritons and 74-75
Electric field enhancement in metallic grating
above and below mouth of central groove 58, 73
above and within mouth of central groove 59
propagative zeroth spectral order 65
within and below mouth of central groove 60, 61, 74
Electric field enhancement, influence of cavity resonances 61-66
above grooves 70-72
within grooves 67-68, 75-76
groove depth and 69, 76
observation point ordinates 69, 77-78
Electrochemical interface
ionic crystal model 399, 400-1, 402
non-primitive ion-dipole model 342-49
primitive model integral equations 335-40
Electrodynamic models, vibrational lineshape frequency
dipole-dipole interactions 254, 255, 256, 260, 262
isolated diatonic molecule adsorbed on metal surface 250-53
Electromagnetic field (EM) models, Rama scattered and SERS 212-14
Electron energy loss spectroscopy (EELS)
CO/Fe(100) 309-10
C-O stretching mode and 254
complementary scattering spectroscopies and 233-34
dipole scattering theory, long-range 223-25
impact scattering, short-range 228
line width and 265-66
negative-ion resonance scattering rgeories 229-33

(EELS, cont.)
predictions 225-26
vibrational frequency, stretching mode 241-42, 243
vibrational loss spectra 226, 227
Electron gas energy, jellium model 350-51
Electron-hole-pair mechanism, vibrational damping 275
asymmetry and 293
damping 280, 281-82
excitation 279-80, 282
isotope effect in line width 287-89
and localized oscillator coupled to excitation continuum 289-90
localized vibrational mode and 290
negative frequency shift and 284-87
non-adiabatic process of 282, 285
Electronic and vibrational properties, correlation of 247, 260-61
Electronic density profile, jellium model 351-53
electronic work function and 354
surface charge and 355, 356, 357
work function and 354
Electronic energy, adatom 379, 380-81
Electronic energy levels, bulk and interface 374-75
Electrosorption and partial charge transfer, metal and adsorbing species 371-74
Electrosorption, lead on gold 396
adsorption 396
desorption 397
underpotential deposition (UPD) 396-98
Electrosorption on metal electrodes
electronic energy levels in bulk and at interface 374-76
model Hamiltonian 376-80
partial charge transfer and electrosorption valency 371-74
Electrosoption valency 372-74
Electrostatic potential
of adsorbate 390, 391, 392, 393
at metal/electrolyte interface 372, 373
point charge near interface 389-90
Entropy in adsorbed layer, N_2-Ni(110) system 150
differential, ISS isobars 155
integral, UPS isobars 153, 154
Evanescent wave amplitude spectra 55, 56

Fano lineshape 292-95
Far-field observables and SERS reflectivity spectrum 3-4, 19, 20
Far-field reflectivity and near-field correlation 9-10, 13, 14, 18-19

Far-field response, S-polarization
cavity resonances 48-49
cavity resonances and cavity mode amplitude 41-44
influence, propagative order grating efficiencies 48-49
minimax function 45
monomode regime 45-46
perfectly conducting grating 42, 45
phase retardation theory 38, 39, 40-41
Floquet condition, boundary value problem 25
Frequency modulation model, lineshapes 236-37

Gouy-Chapman theory, metal/electrolyte interface
compared with computer simulation 332-35
Helmholtz potential 329
ion interaction portential 326-27
pair correlation functions 330-32
potential profile 327-28
Grating anomalies
first-order efficiency 40
near-field enhancement and SERS 14, 18-19
phase retardation theory and 39-40
p-polarized light 14, 38, 40
s-polarized light 40
zeroth-order efficiency 38-39
Grating anomalies, surface resonances
cavity resonances 17-19
edge and minimax features 14-15
magnetic field at surface 16-17
plane reactance surface model 15-16
Rayleigh and 14, 15, 16
Grating, holography and metallic film 4, 5, 6-7, 8
Grating period (d) and groove width (w), field enhancement in grooves 79-82
Grating response, role of resonances 41-44
Grating spectra, abnormal vs. normal 38
Grating vicinity and detection of S-resonances 57-61
Groove, conditions at mouth in lamellar grating 27-28
Groove depth, metallic grating
influence on electric field enhancement 69, 72-74, 76
phase retardation theory and 38, 39-40, 41
Groove height and electric field enhancement 74, 75, 77, 80
Groove width (w) and grating period (p) and field enhancement in grooves 79-81

Halide ions on mercury, charge transfer coefficients 384, 385
Hypernetted chain (HNC) approximation ions 335, 336
MPB approximation results and 337-38
solution as HNC equation 337
solution as HNC/MSA equation 337-38
Hypernetted chain elementary(HNCE) 339, 341
Hypernetted chain local (HNCL) 338-40, 341

Infrared reflection absorption spectroscopy (IRAS), chemisorption N_2-Ni(110) system
absorption as function of coverage 135
absorption, high coverage regime 134
absorption intensity vs. coverage 136-37
spectra, N-N stretch vibration 133
Infrared reflection absorption spectroscopy, polarization modulated Fourier transform (FT-IRAS)
CO adsorption, coverage and temperature of metal films 307-8
CO/Pt oxidation 305-6
Infrared reflection absorption spectroscopy (IRAS), vibrational properties of adsorbates on solid surfaces
absorption spectra, C-O stretching mode, CO/Pd(111) 192, 193, 194, 195
absorption spectra, CO/Cu(111) 194-95, 196-97
enhanced ATR technique 203, 204
field analysis of optical reflection 189
limitation of 197
model, thin film molecules, metal surface 188-91
spectra and LEED observations 193-95
spectra CO adsorbed on Cu evaporated films 191, 192
vibrational frequency, stretching mode 241-42, 243, 254
Integral equations, primitive model of electrochemical interface
HNC 337-38
HNC approximations 335, 336
HNC results 337
MSA extensions 338-40
MSA results 337-38
Intensity and vibrational lineshape 196, 204, 244-57
Interface, semiconductor and molten salt
ionic crystal model 399-402
molten salts 402-5
one-dimensional semiconductor 405-6

(Interface, cont.)
surface states 406-10
Ion-dipole model, nonprimitive electrochemical interface
HNC approximation 348
MSA extension 348-49
MSA results 342-48
Ion-dipole-jellium model, double layer metal/electrolyte interface
capacitance of inner layer 366, 367
capacitance of interface 363, 364
inner layer 368, 369, 370
jellium interaction energy 361-62
jellium solvent interaction energy 361
pseudopotentials and 365-67
trial functions, results 367-70
Ion scattering spectroscopy (ISS) chemisorption, N_2-N_i(110) system
ISS isobars, N_1 and N_2 117, 118, 120
ISS isobars, various pressures 121
spectra and scattering geometry 119
thermodynamic quantities and 120, 121
Ionic crystal model, semiconductor/molten salt interface
densities of state 400-1, 402
model Hamiltonian 399, 401
IR spectroscopy, picosecond 311-13
IR-emission spectroscopy, line width of molecule-substrate mode 275-78
IR-stimulated desorption
EHP excitations and 301-2
energy transfer processes and 302, 303
molecule-solid surface interactions 299-302
one-dimensional model 300-1
pyridine and 298
quantum statistical theory and 302
vibrational damping processes and 312
vibrational relaxation processes and 305
Isoteric head of adsorption
assumptions and formalism 140-42, 147
comparison, XPS isobar and ISS data 148, 149, 151, 152
coverage changes and 170-71
entropy in adsorbed layer 150, 153, 154, 155
as function of signal intensity 146-48
at lowest coverages 145-50, 151, 152
UPS isobar 142, 144, 145, 154
XPS isobar 142-43, 145
Isotopic mixture experiments, random array vibrational lineshape frequency
dipole coupling theory and 256, 260
IR spectra 258, 259, 260
line width and 266

Jellium model
free electron gas 349-51
jellium with pseudopotentials 357-59
trial functions and 351-53
work function and response, external field 354-57. See also Ion-dipole-jellium model
Jellium surface
background charge 349, 350
electronic density profile 350-51
Jellium with pseudopotentials, single planes
Ashcroft potential 357-58
pseudopotential lattice 358
work function and 359

Kinetic data correlation to thermodynamic measure, N_2-Ni(110) 174-75
Kinetic results, N_2-Ni(110) studies 138, 139

Lamellar grating
resonance anomalies and 16-17
scattering configuration 21
Lattice sums and surface integrals, electrostatic potential 390-93
Line width and vibrational spectrum
asymmetric Fano line shape and 292
back-donation and bonding, CO/metal 291-92
damping rate 278-79, 280, 281-84, 285-87
dephasing theory and 269-71
EELS 265, 266
IR and decreasing temperature 267, 268
IR spectroscopy and 275-78
IRAS 266
LEED information and 265, 267
nonradiative transition 278
phonon process and vibrational damping 276-78
SEW experiment 266, 267
Low-energy electron diffration (LEED), chemisorption on Ni(110) surface
banana phase 110, 113
coverages above one-half monolayer 109, 110-12
coverages less than one-half monolayer 108-9
isothermal kinetic expressions 115-17
kinetics 113-15
Low-energy electron diffraction (LEED) information and line width 265, 267

Mean spherical approximation (MSA) 335, 336
results of 337
solution as HNC/MSA 337-38

Mean spherical approximation (MSA), ion-dipole model
capacitance in 345, 346, 348
density profiles 342, 344
potential profile 344-45, 347
Metal adsorbates, rapid charge transition
discontinuous charge 395
electrosorption, lead on gold 396
multiple solutions representative energies of states 393-95
Metal electrode, jellium model
free electron gas 349-51
jellium with pseudopotentials 357-59
trial functions and 351-53
work function and response to external field 354-57
Metal electrolyte interface
BGY and EN theory 340
Gouy-Chapman theory 328-30
Gouy-Chapman theory and computer simulations 332-35
ion-dipole-jellium model 359-60
MPB5 theory 340-41
nonprimitive ion-dipole model 342-49
Poisson-Boltzmann approximation, pair correlations 330-32
primitive model 326-28
primitive model, integral equations 335-37
Metal ions, estimation of charge transfer coefficients 384-85
Metallic surface, electrochemically and photochemically etched and SERS 4, 5
Molten salt, semiconductor/molten salt interface
coherent potential approximation 402, 403
electronic conductivity 404
local densities of state 404, 405, 407-8
MPB5 (Modified Poisson-Boltzmann approach) See Poisson-Boltzmann approximation, modified

Near-field enhancement and SERS 3, 4, 6, 9, 12-14
far-field reflectivity and 9-10
grating anomalies and 14, 18-19
Ni(110) geometry 104, 105
N_2 adsorption, Ni(110) surface 165-75
ISS and UPS experiments 107
LEED and TDS data 107
phase diagram 105-6
XPS measurements 107
N_2-Ni(110) adsorbed layer entropies, statistical mechanical models
differential molar entropies 171, 172
(N_2-Ni(110)...entropies...cont.)
rotational contribution 173
vibrational freedom contribution 171-73
N_2-Ni(110) adsorption phases
banana phase 113-14, 127
commensurate (2x1) phase 105, 109, 127, 166, 167
incommensurate (4x1) 169
fluid 105
N_2-Ni(110) system, chemisorption studies
coverage calibration 137-39
IRAS 131-37
ISS 117-20
LEED 108-17
multitechnique approach 103
sample preparation and cleaning 107-8
thermal desorption spectroscopy 129-31, 132, 133
UPS 122-24
work function measurements 124-29
XPS 121-22
N_2-Ni(110), thermodynamic and kinetic parameters 174
isoteric heat of adsorption and entropy in adsorbed layer 140-50, 169
kinetics, desorption and adsorption 150-69
NO adsorption behavior 242, 244, 245

Ornstein-Zernicke (OZ) equation, theories of liquids 335, 339

Pair correlation functions
Gouy-Chapman model 331
modified Poisson-Boltzmann 5 340-41
Poisson-Boltzmann approximation 330-32
Phase retardation theory, 38, 39-40, 41
Phonon process and vibrational line width 276-77
Plane reactance surface model, grating anomalies and 15-16, 19
Plane wave amplitudes, determination of S-polarization
matrix equations for 27-28
matrix equations, numerical procedure 31-37
Rayleigh 53-57
Plane wave amplitudes, evanescent
growth characteristics of 55-56
influence of resonances on 70-72
vs. propagative 54
Plane wave and mode amplitudes 27-28
Plane wave representation, Rayleigh 14, 15, 16, 19, 20, 26
Plane wave response, lamellar grating system 21-26
Plane surface polaritons and electric field enhancement 74-75

Plane wave, perfectly conducting grating 32-34, 36, 37
Poisson-Boltzmann approximation, pair correlation functions 330-32. See also MPB5
P-polarization surface plasmon resonance vs. S-resonances 74-75
Potential dependence, charge transfer coefficient 385
Potential profile, Gouy-Chapman theory 327-28
Pressure and coverage calibration, N_2-Ni(110) studies
comparison of XPS and UPS isobars 121, 122, 138, 139
ISS data and UPS results 139
Pyridine on AG
IR-stimulated desorption process 298-99
SERS spectrum 297

Radiation condition, boundary value problem 24
Raman scattering, dye molecule adsorption on metal surfaces 309
Raman scattering spectroscopy (RSS)
advantages over IRAS 204
limitation 205
SERS and 206. See also Surface enhanced raman scattering (SERS)
Raman-Stokes polarizability tensor identification 11, 12
Rayleigh plane wave and cavity mode amplitudes
evanescent vs. propagative spectral orders 54
growth characteristics 55-56
plane reactance surface concept 53
poles of 50, 57
Rayleigh plane wave representation 14, 15, 16, 19, 20, 26-27, 28-30, 50
Reflectivity
and determination of S-polarization 29
and excitation spectra correlation 8, 9
Reflectivity spectrum and SERS 3, 4, 6
Resonance interval theory and electric field
groove depth and 69
within grooves 67-68
influence of cavity resonances 61-66
Resonance intervals
cavity mode amplitude and 44
cavity resonances 48-49
far-field response 45-46
real and imaginary parts 42, 45, 46, 47, 50-51, 53
Resonance polariton identification with pole of cavity mode amplitude 44-45
Resonance poles, S-polarization 54-55
Resonance scattering, negative-ion theories
displaced oscillator model 231-32
harmonic oscillator model 233
N_2/Ag 230-31
OH/NiO 229-30
time-dependent Boomerang model 232-33
Resonances
influence on propagative order grating efficiencies and evanescent plane wave amplitudes 70-72
role of in S-polarization grating response 41-44

Scattering problem, lamellar grating system
boundary value problem and 23-24
cross-section view 21, 22
three-dimensional view 21, 22
Semiconductor, one-dimensional at interface 405-6
Semiconductor/molten salt interface
ionic crystals model 399-402
model Hamiltonian 399, 401, 407
molten salts 402-5
one-dimensional semiconductor 405-6
quantum mechanical model 398-99
surface states 406-10
Short-range effects, SERS 10, 11-12
Spectral lineshape theory and vibrational excitation 234
heat bath, many-body effect 236
line width mechanism, adsorbate spectra 236
pure dephasing decay process 235-36
pure dephasing example 239
T_1 relaxation, decay process 235-36
T_2 relaxation 236
time-dependent frequency modulation 236
Spectral order amplitudes, S-resonances
real and imaginary parts 55-56
wave length modes 51, 54-56, 57
S-polarization in far-field observable 38-41
S-resonances
detection of and groove vicinity 57-60
poles of 54-55
spectral order amplitudes 55-56
theory of Hessel and Oliner extended 83-85
theory of Hessel and Oliner vs. Andrewartha 53-57
Sticking coefficient, thermal desorption spectroscopy
determination of 162-63, 164
TDS spectra 130, 132, 133
Stretching vibration 206-7, 210-11

Surface electromagnetic wave spectroscopy (SEWS), adsorbates on solid surfaces
ATR geometry 200-1
ATR spectra 202, 203
broadening and line width 266, 267
enhanced IR absorption and Kretschmann geometry 201, 202
excitation of SEW 197-98
propagation of SEW 198, 199-200
Surface enhanced Raman scattering (SERS)
Ag films, pore structure 12-14
reflectivity spectrum 3, 4, 6
short-range effects 10, 11-12
systems and 5-8
three-component material systems 4-5
Surface enhaced Raman scattering (SERS), CO/Ag system
chemical effects 209, 212, 214
chemical effects, CT interaction model 215-20
chemical effects, experimental evidence 220-21
C-O stretching mode 206-7
C-O stretching vibration 209, 210
EM field model and Raman scattering 212-14
Raman spectrum 207-8
SPP field enhancement model 213-14
vibrational frequency, stretching mode 241-42, 245
Surface enhanced Raman scattering (SERS) spectrum
CO/Ag films 308
FT-IRAS, CO/Pt oxidation 306-7
optical properties, dye molecules 308-9
pyridine/Ag 297
Surface resonances, grating anomalies as forms of 14-19
Surface unenhanced Raman scattering (SURS) and SERS 221-22
Surface vibrational spectroscopy, adsorption states and spectrum 185-86
Symmetry
C-H and C-D stretching modes 287-88
stretching mode 267
vibrational frequencies 241-42, 243

Temperature and lineshape 235-36, 239
bridge-bonded CO/Ni(111) 267-69
IR spectra, CO/Ni 271-74
vibrational dephasing 269-71
Thermal desorption spectroscopy (TDS)
experimental method 129
kinetics 152-54, 156-62
spectra 130-31, 132, 133
